Risk Disclosure

NetworkAiBot · Effective 5 September 2026 · English

1. No guarantee

NetworkAiBot publishes daily return bands, package ranges, and rank rewards. Those figures describe the Platform's current programme. They are not a promise of profit, capital protection, or a regulated investment product.

2. Market and technology risk

- AI bots trade markets that can move against the book. Losses can exceed a day's published band.
- Smart-contract, wallet, hosting, or payout-provider failures can delay or prevent a withdrawal.
- USDT and BEP20 can change in value, be frozen by an issuer, or become harder to move.

3. Liquidity and operational risk

Withdrawals depend on the Platform's payout rails and on-chain conditions. Congestion, provider limits, or a maintenance window can slow a request that has already been approved in the member panel.

4. Regulatory risk

Rules for digital assets and automated trading differ by country and can change. Access from your location may become restricted. You are responsible for knowing whether you may use the service.

5. Referral risk

Direct, binary, and rank income depend on real, qualifying volume. Building a tree does not by itself create a return. The Platform may claw back rewards tied to fake, self-referred, or reversed volume.

6. Acknowledgement

By staking you confirm that you have read this disclosure, the Client Agreement, and the English business plan, and that you understand you may lose some or all of the amount you stake.
